About	<p>Irritrol is a single step disinfecting endodontic irrigation solution, used as a final rinse after sodium hypochlorite. Irritrol effectively disinfects, removes the smear layer, and is gentle on dentin. This single step solution efficiently removes the smear layer less aggressively than EDTA, therefore causing less demineralization of the dentin. By incorporating this single step solution into your practice you will work faster, smarter, and more cost effectively.</p>	About	<p>SmearOFF™ is an EDTA based formula, enhanced with Chlorhexidine, which removes the smear layer and kills 99.9%** of bacteria. This mix eliminates steps for the clinician and saves time with each procedure</p>	About	<p>QMIX 2in1 irrigating solution is a single solution used as a final rinse after bleach for one-step smear layer removal and disinfection. Its nonantibiotic, premixed formula provides a “best practice” irrigation protocol in fewer steps for proven and effective irrigation made easy. Superior smear layer removal Kills 99.99% bacteria* Ready to use, fast working</p>
